

THE YALE BROADCASTING COMPANY is a non-profit corporation that operates the following commercial radio stations:

WYBC, 640 on the AM dial. The programming is rock, r & b, news, and sports. The transmitter, affectionately called "Ray," is in Hendrie Hall basement. From there coaxial cables run through the university steam tunnels to each of the Yale dormitories, where the signal is tied into the AC wiring of the buildings. On any given day, almost half of the Yale campus listens to this station.

WYBC-FM, 94.3 on the dial. This is a Stereo Multiplex station with an effective radiated power of 1200 watts. The transmitter is on the tenth floor of Payne Whitney Gym, and the antenna is on the tower's roof. The signal reaches most of southern Connecticut, and parts of Long Island as well. The programming is classical, jazz, folk, acid rock, top forty, and easy listening. News, sports, and special productions receive prime time attention. WYBC-Fm is the number one station in the New Haven market.

WYBC-A, 540 on the AM dial. Nora is the name of the transmitter for this station, and like Ray she is in Hendrie Hall basement, wired via the steam tunnels to serve the whole campus. WYBC-A simulcasts the programming on WYBC-FM, to enable Yale students without FM radio to enjoy our fine music programming.

These are the voices of the Yale Campus.

This booklet is a guide to the organization behind them.
